

DIVER6

Diver Tracking & Management

Diver6 is a diver tracking, safety, and situational awareness management system. Using acoustic underwater communication technology, Diver6 can wirelessly track and monitor multiple divers at ranges up to 1000 meters and depths of 100 meters.

Using the experiences of real-world subject matter experts (US Navy SEALs & EOD, Salvage Divers, Coast Guard, and public safety divers), Diver6 provides up to date information on the divers allowing divemasters to make faster, safer, and more accurate decisions.

Tablet & Software

Diver6 software is specifically developed to provide dive masters with multiple views of the divers in the water. **Depth, bearing, range, and vitals** are now available topside for observation. Dive masters can monitor all aspects of a dive and record them for analysis and personnel dive records.

Diver6 saves divers by providing up to date situational awareness information to supervisors so they can accurately manage the dive and bring divers back to the surface safely.

FEATURES

- Georeferenced locations of divers in water column
- Real-time monitoring of tank pressure, water temperature, and depth
- Omnidirectional transducer with 1000m range
- Easy to setup and completely battery powered
- Diver Assist to send one dive to another injured or incapacitated diver
- 100m depth rating and 12-hour battery life
- Divers can send SOS messages
- Real-time range, bearing, and depth to waypoints
- Birdseye and 3D views of diver's positions
